📁 PROJECTS

Amazon Clone

- The Amazon Clone web development project aims to create a functional and user-friendly e-commerce platform inspired by the popular online marketplace, Amazon.
- The project involves developing a website that allows users to browse and purchase a wide range of products, including electronics, fashion, home goods, and more.
- The clone will feature a comprehensive search and filter functionality, enabling users to quickly find products based on their preferences, price range, and other specifications.
- This project incorporates user account management features, including registration, login, and personalized profiles to enhance the overall shopping experience.

Budget App

- User can add a budget with name and amount, user can Add expenses and view expenses, and delete expenses.
- User can add expenses with description, amount, and particular budget name.
- User can see all expenses and the total budget amount in one particular cart.
- In this project we used local storage.

🧠 SKILLS
